

MEDICAL REPORT

Patient: Alisher Nurlanovich Omarov

Date of consultation: 22.07.2025

Consultation format: Remote evaluation based on the patient's subjective complaints

I. Patient Complaints

The patient reports the following symptoms:

- Chest pain occurring during deep inhalation, persisting for the past two days;
- Dry, non-productive cough;
- A sensation of breathing difficulty and subjective shortness of breath, described as a feeling of "stuffy air" or "difficulty breathing."

According to the patient, symptomatic treatment was previously initiated under the assumption of a common respiratory infection (ARI), but no significant clinical improvement was observed.

II. Objective Findings

Radiological data were partially available at the time of this assessment. The patient provided a single CT scan image of the lungs for evaluation.

III. Lung CT Image
